---

Eric,

Your email came in during our Exec meeting so I was able to run your request past Exec for immediate consideration. The LWG agrees to provide the requested GIS layers. Keith and I will check with our tech folks to see how quickly we can pull this together and get it off to you.

Thanks, Jim.

**Subject:** GIS Layer Request

Jim and Bob, EPA is in the process of developing information to facilitate EPA and the LWG reaching agreement on the screening of remedial action alternatives for the Portland Harbor FS.

Although many of the GIS layers that EPA is interested in are available on the Portal, there are a number of layers that have not been posted. The majority of these are presented in the Round 2 Report and should be readily available as GIS layers. EPA is requesting the following GIS layers:

Revised AOPCs reflecting more accurate river shoreline.

Physical Habitat Layers as presented in Round 2 Report (e.g., open water, wetlands, shallows, vegetative shoreline features, etc.)

Bathymetric Change Maps as presented in the Round 2 Report. (note the layer on the LWG portal does not match the layer presented in the Round 2 Report).

Modeled bottom shear forces as presented in HST and Round 2 report.

Beach and bank type as presented in Round 2 Report

TOC as presented in Round 2 Report.

In addition, EPA is interested in the results of the Site Use Survey completed earlier this year.

Thanks for your cooperation in this matter.

Eric
